

SARGUNAN C

Applied GenAI Engineer

Bengaluru, Karnataka, India | csargunan04@gmail.com | +91 6374753452 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Applied GenAI Engineer and recent B.Tech graduate building practical LLM applications, retrieval-augmented generation (RAG) pipelines, and AI-driven workflow automation. Experienced in integrating LLM APIs, vector search, and structured-output extraction into functioning end-to-end systems using n8n and Python. Focused on production-oriented AI engineering rather than isolated experimentation.

TECHNICAL SKILLS

Generative AI: LLMs, Generative AI, Prompt Engineering, RAG, AI Agents, Embeddings, Vector Search, Semantic Search, Context Retrieval

AI Engineering: LLM APIs, Retrieval Pipelines, Document Processing, Structured Outputs, JSON Validation, API Integration, AI Application Development

AI Automation: n8n, Workflow Automation, Webhooks, Email/IMAP Automation, Google Sheets Integration, Workflow Orchestration

Programming & Engineering: Python, JavaScript, SQL, REST APIs, Git, GitHub, VS Code

AI Platforms & Tools: OpenAI API, Groq, Google Gemini, Hugging Face

PROJECTS

RAG-Powered Component Specification Assistant *RAG / LLM / Embeddings / Vector Search / n8n*

- Built a retrieval-augmented generation assistant that answers component specification queries by grounding LLM responses in a dedicated knowledge source instead of relying on model memory alone.
- Designed the retrieval pipeline by converting source documents into embeddings and indexing them for vector search, enabling semantic (meaning-based) rather than keyword-based lookup of relevant content.
- Integrated the retrieval and generation stages using n8n as the orchestration layer, so relevant context is fetched and passed to the LLM before response generation, reducing hallucination risk on domain-specific queries.

AI-Powered Supply Chain RFQ & Email Parser *LLM / n8n / Groq / IMAP / JSON / Google Sheets*

- Automated ingestion of unstructured supplier RFQ emails via IMAP monitoring in n8n, triggering a processing workflow on new incoming mail without manual intervention.
- Used an LLM (via Groq) to extract structured fields from unstructured email text — including supplier name, email, product, quantity, unit, delivery date, price, currency, and notes — and return them as validated JSON.
- Built a validation step to check extracted JSON against expected field structure before logging, then automated writing the structured RFQ records into Google Sheets for downstream use.

3D AI Engineer Personal Portfolio *React / TypeScript / Three.js / React Three Fiber / Framer Motion*

- Designed and built an interactive 3D personal portfolio using React, TypeScript, and React Three Fiber to present GenAI projects with an immersive, responsive interface.
- Implemented smooth UI animations and transitions with Framer Motion, ensuring the site remains performant and professional across devices.

EXPERIENCE

Telecom Infrastructure Intern — Bharat Sanchar Nigam Limited (BSNL) *Chennai, India | June 2025*

- Assisted with broadband and optical fiber infrastructure operations, gaining hands-on exposure to network architecture and real-time configuration in a live telecommunications environment.
- Supported monitoring of network infrastructure components as part of day-to-day operations during the internship period.

EDUCATION

B.Tech — Electronics & Communication Engineering *SASTRA Deemed University*

2022 – 2026 | CGPA: 6.43 / 10

CERTIFICATIONS

- Career Essentials in Generative AI — Microsoft & LinkedIn Learning (2026) — Generative AI, Microsoft Copilot, Responsible AI
- AI and Neural Networks — SASTRA University
